Observation Status vs In-Patient Admission: Making the Call

A Special Case Of The Sorites Paradox: Applying A Categorical Standard To A Continuously Variable Phenomenon
The “Indeterminate Zone” Can Be Managed
InterQual Examples of Possible Diagnoses for Observation Services:

- Chest pain
- Asthma
- CHF (mild)
- Syncope
- Atrial arrhythmias
- Weakness
- Dehydration
- Anemia
- Back pain
- Renal colic
- Transient Ischemic Attack (TIA)
- Rule Out for any condition
- Abdominal pain
- HTN
Exclusion Criteria for Observation Services
Exclusion Criteria for Observation Services

• Services that are not reasonable or necessary for the diagnosis or treatment of the patient.
Exclusion Criteria for Observation Services

• Services that are not reasonable or necessary for the diagnosis or treatment of the patient

• Pre-procedure prep & recovery-DO NOT write refer to Observation Services prior to or pre-procedure
Exclusion Criteria for Observation Services

• Services that are not reasonable or necessary for the diagnosis or treatment of the patient

• Pre-procedure prep & recovery-DO NOT write refer to Observation Services prior to or pre-procedure

• Postoperative monitoring during a standard recovery period, (4-6 hours)

• Pre-procedure prep & recovery-DO NOT write refer to Observation Services prior to or pre-procedure

• Postoperative monitoring during a standard recovery period, (4-6 hours)

• Transfusions

• Chemotherapy

• Services that are provided for the convenience of the patient, the patient’s family, or a physician, (i.e., following an uncomplicated treatment or outpatient procedure, physician busy when patient is physically ready for discharge, patient awaiting placement in a long term care facility)
CMS Weighs In
CMS Weighs In

• The CMS manual states “generally a patient is considered an inpatient if formally admitted as an inpatient with the expectation that he or she will remain at least overnight and occupy a bed…and the decision to admit a patient is a complex medical judgment which can be made only after the physician has considered a number of factors, including the patient’s medical history and current medical needs, the types of facilities available to inpatients and outpatients, the hospital’s bylaws and the admission policies, and the relative appropriateness of treatment in each setting. Factors to be considered when making this decision to admit includes such things as

Economic Considerations
Economic Considerations

• Outpatient observation services are reimbursed under the Outpatient Prospective Payment System.
Economic Considerations

• Outpatient observation services are reimbursed under the Outpatient Prospective Payment System.

• Medicare coverage for observation services requires at least eight hours of monitoring and is limited to no more than 48 hours unless the fiscal intermediary grants an exception. The hospital is only reimbursed for 24 hours.
Economic Considerations

• Outpatient observation services are reimbursed under the Outpatient Prospective Payment System.

• Medicare coverage for observation services requires at least eight hours of monitoring and is limited to no more than 48 hours unless the fiscal intermediary grants an exception. The hospital is only reimbursed for 24 hours.

• An outpatient observation patient may be progressed to inpatient status when it is determined the patient’s condition requires an inpatient level of care.
Economic Considerations

• Medicare coverage for observation services requires at least eight hours of monitoring and is limited to no more than 48 hours unless the fiscal intermediary grants an exception. The hospital is only reimbursed for 24 hours.

• An outpatient observation patient may be progressed to inpatient status when it is determined the patient’s condition requires an inpatient level of care.

• Hospitals can convert and bill an inpatient case as an outpatient using Condition Code 44 if the hospital utilization review committee determines before the patient is discharged and prior to billing that this setting would have been more appropriate. A physician must concur with the decision of the committee, and the physician’s concurrence and status change must be documented in the medical record.

A physician must concur with the decision of the committee, and the physician’s concurrence and status change must be documented in the medical record.

• The tendency is to overutilize observation services, which is problematic for both the hospital and for the patient. Observation patients who remain in observation for more than 24 hours often have higher out-of-pocket costs than they would have if they had been admitted as an inpatient. In addition, the hospital is reimbursed significantly less for these observation patients.

Observation patients who remain in observation for more than 24 hours often have higher out-of-pocket costs than they would have if they had been admitted as an inpatient. In addition, the hospital is reimbursed significantly less for these observation patients.

• Recovery audit contractors (RAC) paid by Medicare will be looking at hospitals’ one-day admissions to determine whether patients were appropriately admitted or should have been under observation status. Short stays with symptom codes are a major problem.
Be Painstaking, Not Cautious

If hospitals implement a compliant, concurrent process for certifying patient status, they will achieve defensible determinations that maintain regulatory compliance and ensure that reimbursement received by hospitals and physicians will be correct and not subsequently lost on audit.
When In Doubt

1. Contact a Case Manager. (Milliman Criteria)

2. Case Manager may contact the hospital’s compliance advisor, EHR. ($)

3. EHR reviews the case, provides a letter.

4. If need be, EHR will pay for an appeal, with likely success.
Exactly how tough is this?
THANK YOU
